

Thumb & Wrist Wrap

- 

1. Slide the thumb into the thumb piece with the curved seam in the web space (Figure 1) . Trim the thumb length as needed .
- 

2. Wrap the short flap around the hand and gently pull to bring thumb into the desired position. Wrap the long flap around hand and fasten it to the small hook tab on the ulnar end. Continue wrapping and secure using the hook strap (Figure 2) . Adjust the thumb support as necessary for comfort. Trim with scissors where needed .

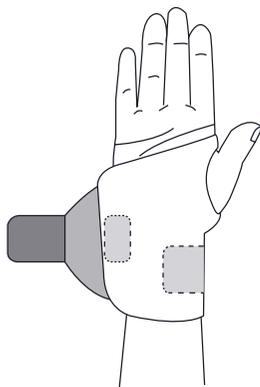

Wrist & Thumb

Fitting Guide

Long Wrist Wrap

1.

1. Place the thumb through the hole.
(Figure 1) For the right hand, the short flap will be against the palm. For the left hand, the short flap will be against the back of the hand.

2. Wrap the support around the wrist, fastening its hook tab to the inside of the wrap. The distal edge of the splint should lie below the palmar crease. (Figure 2)

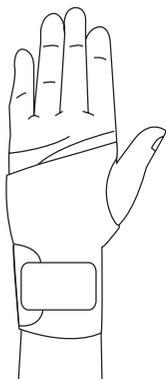

3. Fasten the hook strap to the loop for a comfortable, snug fit.

4. Trim the strap end as needed.

5. The neoprene material can be trimmed for a more custom fit.

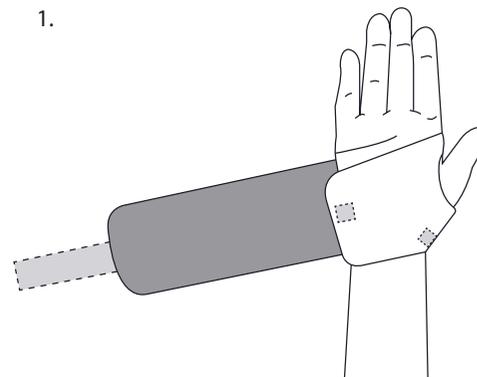

Note: If pain increases or persists, discontinue use and seek medical advice.

2.

Wrist Wrap

1.

1. Place the thumb through the hole with the seam below the thumb. (Figure 1) For the right hand, the short flap will be against the palm. For the left hand, the short strap will be against the back of the hand.

2. Secure the inside of the wrap to the hook tab along the ulnar border. Wrap the support around the wrist, fastening it to the hook tab below the thumb. The splint should be below the palmar crease. (Figure 2)

3. Fasten the hook strap for a comfortable, snug fit.

4. Trim the strap end as needed.

5. The neoprene material can be trimmed for a more custom fit.
