

Mini Thumb Wrap

a one-piece low-profile thumb and wrist wrap designed to provide a gentle level of compression at the base of the thumb. This support assists with the treatment of conditions like osteoarthritis, fatigued joints and CMC and MCP instability or weakness.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Arthritis
- + Carpel Tunnel
- + CMC and MCP Issues
- + Fractures
- + Ligament Injuries
- + Osteoarthritis
- + Thumb Fatigue

Designed to be discrete and inobtrusive, taking up the minimum amount of space necessary on the hand and allowing the user to conduct activities and tasks throughout the day without issue.

The Mini Thumb Wrap uses Velcro fastenings at the wrist and thumb to provide a gentle level of compression to the joint. This ensures the thumb is still allowed to move and flex naturally without the risk of aggravating the joint further.
