

Paediatric Elastic Wrist/Thumb Brace

Supporting and stabilising the wrist is essential when it comes to encouraging rehabilitation and the healing process. This is especially true for children and the Paediatric Elastic Wrist Brace with Thumb Support is designed with their needs in mind. Offering moderate compression evenly around the whole brace, the splint eases the discomfort felt from an injury and helps prevent further injuries, such as minor sprains and strains, from occurring.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Arthritis
- + Sprains and strains
- + Soft tissue injuries and conditions
- + Instability
- + Post fracture management

Offering moderate compression evenly around the whole brace, the splint eases the discomfort felt from an injury and helps prevent further injuries.

Worn with the bar support across the back of the hand, the brace helps to stabilise both the wrist and the thumb, but allows movement of the fingers.
