

# Paediatric Wrist/Thumb Splint

Supporting and protecting the wrist after an injury occurs is crucial to the healing and rehabilitation process, especially in children who are active, often unaware and on-the-go more than adults. The Paediatric Wrist/Thumb Splint grants your child an optimal balance between comfort and protection while they recover from sprains, strains, instability fractures and a range of other soft-tissue injuries.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Arthritis
- + Sprains and strains
- + Soft tissue injuries and conditions
- + Instability
- + Post fracture management

Lycrafleece material is designed to be tough, durable and comfortable, while remaining breathable to help with temperature regulation.

Designed specifically for children with a playful, colourful design.

Using a single rigid metal splint piece, this brace works by keeping the wrist bone and forearm in place whilst healing occurs following an injury.
