

Whitechapel Finger Splint

The Whitechapel Finger Splint is a finger strap splint designed to increase the range of movement by securing the injured finger to a stronger finger. The practice of securing the injured finger to the stronger finger is commonly known as the buddy strap effect and allows for a lightweight, comfortable and secure finger splint.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Arthritic conditions
- + Tendonitis
- + Swelling
- + Inflammation
- + Strains and sprains
- + Injuries to the PIP joint
- + Hairline fractures
