

Intrinsic Wrist Brace

Padded elastic wrist brace with a full-length adjustable aluminium resting splint. The splint is wide enough to contain all four fingers and can be easily adjusted to hold the wrist and fingers in the desired position. There is a wide, padded adjustable dorsal closure strap that can be used to hold the fingers in position.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Osteoarthritis
- + Post carpal/metacarpal surgery
- + Supports CMC/MCP joints
- + Flaccid paralysis
- + Flexor tendon injury
- + Repetitive strain injury

Elastic wrist brace for robust support. Ideal for injuries, arthritis, RSI and much more.

Features a wide, padded and comfortable dorsal area with a strap to immobilise the fingers. Can be easily adjusted to hold the wrist in the desired position.

Padded elastic wrist brace with a full-length splint for effective immobilisation. Splint can contain all four fingers for complete support.
