

# Procool Wrist Support

This support provides effective circumferential compression and support to the wrist whilst allowing full thumb and finger motion.

Useful as a step-down splint in later stage rehab or to encourage function with patients who struggle with transition from immobilisation to movement due to pain or anxiety. The brace can be trimmed if required.

Provides wrist and thumb support for an array of injuries, conditions, pre-and post-operations such as:

- + Arthritic conditions
- + Sprains / strains
- + Post wrist fracture
- + Post reconstructive surgery
- + Tendinitis

Made with tiny perforations in the Neoprene for comfortable wear and a terry cloth lining that feels good against the skin.

Developed to help you transition from wrist immobilisation to free movement. The elastic nature of the fabric means this support will continue to provide gentle compression consistently as the swelling is reduced over time.

Leaves fingers and thumb unhindered
